

The C-R theory view is: Our entire universe is the inside of a giant **Black-Hole^{C-R}**

Compared to the center of the universe, at the outermost region, time (here) is 0%

(Red Shift)
As curvature (gravity) increases up to 100% of light-speed, the real time matter "feels" slows down to 0%

At Earth's position
★ there is no
red shift

or blue shift, but everything closer in to the center is blue-shifted, while everything further out is **red-shifted**

Note: The "Great Attractor" is not attracting anything, it is simply less slowed-down than here on earth. We are simply less slowed-down than everything else closer to the outer edge.

Title: Univ in B-H diag

The Neutral Zone^{C-R} (Not detectable from inside our universe.)
100% complete red-shift, no real time allowed. Total isolation, complete insulation, no interaction at light-speed permitted.

The outermost galaxies are not rushing away, expanding outward, much less accelerating. There is no big bang expansion. Just gravitationally produced redshift.
